Chapter 1

Prerequisites

This is a **documentation book**, providing details on data structure and analyses of the the master thesis “Habitat-demands, micro-climate and freezing resistance of the tussock graminoids *Carex curvula* and *Nardus stricta*”.

The **bookdown** package, used to create this book, can be installed from CRAN or Github:

```
install.packages("bookdown")  
# or the development version  
# devtools::install_github("rstudio/bookdown")
```

Remember each Rmd file contains one and only one chapter, and a chapter is defined by the first-level heading #.

To compile this example to PDF, you need XeLaTeX. You are recommended to install TinyTeX (which includes XeLaTeX): <https://yihui.org/tinytex/>.

Chapter 2

Introduction

You can label chapter and section titles using `{#label}` after them, e.g., we can reference Chapter 2. If you do not manually label them, there will be automatic labels anyway, e.g., Chapter ??.

Figures and tables with captions will be placed in `figure` and `table` environments, respectively.

```
par(mar = c(4, 4, .1, .1))
plot(pressure, type = 'b', pch = 19)
```

Reference a figure by its code chunk label with the `fig:` prefix, e.g., see Figure 2.1. Similarly, you can reference tables generated from `knitr::kable()`, e.g., see Table 2.1.

```
knitr::kable(
  head(iris, 20), caption = 'Here is a nice table!',
  booktabs = TRUE
)
```

You can write citations, too. For example, we are using the **bookdown** package (Xie, 2020) in this sample book, which was built on top of R Markdown and **knitr** (Xie, 2015).

Chapter 3

Data structure

Here is a review of existing methods.

3.1 Observational study

Chapter 4

Statistical analyses

We describe our methods in this chapter.

Chapter 5

References

Used packages and literature are demonstrated in this chapter.

5.1 R Packages

5.2 Literature

Chapter 6

Final Words

We have finished a nice book.
